PREFACE

This State-of-the-Art Report was prepared by the Thermophysical and Electronic Properties Information Analysis Center (TEPIAC), a Department of Defense Information Analysis Center. This Center is operated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS), Purdue University, West Lafayette, Indiana 47906, under Defense Logistics Agency (DLA) Contract DLA900-79-C-1007. The Government Administrative Manager for TEPIAC is Mr. J.F. Pendergast, Program Manager for Information Analysis Centers, Defense Technical Information Center (DTIC), Cameron Station, Alexandria, Virginia 22314. TEPIAC is under the technical direction of the Army Materials and Mechanics Research Center (AMMRC), Watertown, Massachusetts 02172, with Mr. David W. Seitz as the Contracting Officer's Technical Representative. The Contract was issued by the Defense Electronics Supply Center, Dayton, Ohio, with Ms. Sara M. Williams as the Contracting Officer.

This report presents the most complete list of information and data sources that are known to exist for the thermophysical and electronic properties of foreign stainless steels. These steels are arranged according to the compositions, which make it simpler to compare these with the U.S. steels and to find their equivalent. The data and information on the properties of foreign stainless steels are important not only in its own right, but are also for use in helping to resolve the controversy between various data available on the U.S. equivalent steels or even to fill the data gaps that may exist in the properties for U.S. steels. The bibliography in this report contains approximately 431 citations.

It is possible for the user to make retrospective searches quickly on over 460 different foreign steels which are listed in the Materials Directory. In turn, the user refers to the Technical Coding to tailor each search for retrieval on any given set of parameters, such as property, physical state, subject, and temperature range. Finally the search will yield a selection of citations from the Bibliography. Simple and easy to use instructions are included.

This work is believed to be very useful to DoD and other engineers and scientists working on various research, development, and engineering programs who have a need for information on foreign stainless steels.

The author wishes to acknowledge the individual and collective contributions of our Scientific Documentation Division which have made this publication possible. Additions to the file continue on a routine basis. Updated searches and other services are available on request.

West Lafayette, Indiana
October, 1981

C. Y. Ho
Interim Director of CINDAS
Purdue University

ABSTRACT

This report presents comprehensive bibliographic information on the thermophysical and electronic (including electrical, magnetic, and optical) properties of 462 different foreign stainless steels. The steels included in the report are from Czechoslovakia, France, Germany, India, Italy, Japan, Poland, Romania, Sweden, The Netherlands, United Kingdom, USSR, and Yugoslavia. The bibliographic citations are indexed in depth. Concise instructions are also given so that the user can quickly make retrospective literature searches for specified foreign stainless steels and properties.

The thermophysical properties covered in this report are: thermal conductivity, thermal diffusivity, specific heat, thermal linear expansion, thermal volumetric expansion, viscosity, emittance, reflectance, and absorptance. The electronic properties covered are absorption coefficient, dielectric constant, energy gap, electrical resistivity, electron emission properties, magnetic hysteresis, magnetic susceptibility, magnetoelectric properties, magnetomechanical properties, photoelectric properties, refractive index, and work function.

THE ORGANIZATION OF THE VOLUME

One of the features of the TEPIAC Computerized Information Storage and Retrieval System is its ability to create research literature source books for selected groups of materials. This report presents such a source book for foreign stainless steels. Stainless steels included in this report are those iron alloys containing less than ≥ 12 wt.% chromium and less than 2 wt.% carbon. Those iron alloys containing $\geq 12\%$ chromium with $\geq 2\%$ carbon are included in its companion volume on nonstainless alloy steels carbon steels and cast irons.

The TEPIAC retrieval system is based on assigning a seven digit material number to each material, a one or two letter property code for each property and an accession number to each relevant research document. These three entities of material, property, and document are connected through a codification scheme which allows easy retrieval of information through the presentation described in this report.

This report is composed of three main parts which are: The Materials Directory, Technical Coding, and Bibliography.

In order to find the bibliographic citation for a material for given properties, the simple steps to be followed are as follows:

Find out the material number from the Materials Directory and the property code from the Search Parameters list. By scanning down the Technical Coding listing, one can find accession numbers assigned to the documents containing the desired codes. Finally, the search can be completed by going to the Bibliography to obtain the complete citation for each of the relevant accession number.

MATERIALS DIRECTORY

This directory lists all the stainless steels from thirteen foreign countries. The number of steels from different countries for which thermo-physical and/or electronic properties are available are as follows:

<u>Country</u>	<u>Number of Materials</u>
Czechoslovakia	2
France	9
Germany	109
India	12
Italy	8
Japan	60

<u>Country</u>	<u>Number of Materials</u>
The Netherlands (Dutch)	1
Poland	9
Romania	1
Sweden	5
United Kingdom (British)	51
U.S.S.R.	190
Yugoslavia	5

The materials are listed under each country and within country the materials are arranged alphabetically according to their major components, e.g., Aluminum Steels, Chromium Steels, Nickel Steels, etc. Under these main groups, the materials are further arranged according to their compositions. Most of the materials have internationally accepted official or industrial designations such as GOST (Russian), BS/En (British), JIS, Romanit (German), etc. These designations follow the compositions. Each steel is assigned a unique seven-digit material number in the TEPIAC retrieval system. In addition to the steels with special designations there are a number of experimental steels also included in the materials directory. A material number is assigned to several of these experimental steels with identical composition irrespective of their national origin.

The following books/reports were found useful by CINDAS in the classification and identification of foreign steels:

1. Handbook of Soviet Alloy Composition, Metal and Ceramics Information Center, Columbus Ohio, MCIC-HB-05, 1980.
2. Properties of En Steels, Woolman, J. and Mottram, R.A. (British Iron and Steel Research Association) Pergaman Press, Vol. 1, 1964, Vol. 2, 1966, and Vol. 3, 1969.
3. Stahl-Eisen-Liste, Schmitz, H. (Union of German Metallurgists), Verlag Stahleisen M.B.H., Duesseldorf, West Germany, 1972.
4. Handbook of Comparative World Steel Standards, The International Technical Information Institute, Tokyo, Japan, 1974.
5. International Metallic Materials Cross Reference, Potts, D.L., Materials Information Services, General Electric Company, Schenectady, New York, 1979.

TECHNICAL CODING

Bibliographic searches can be made using the following search codes in conjunction with the seven-digit material numbers.

CodeA. Property1. Thermophysical Properties

Absorptance	I
Emittance	G
Radiative Properties	R
Reflectance	H
Specific Heat	E
Thermal Conductivity	A
Thermal Diffusivity	D
Thermal Linear Expansion	N
Thermal Volumetric Expansion	O
Viscosity	F

2. Electronic Properties

Absorption Coefficient	AS
Dielectric Constant	DC
Electron Emission Properties	EP
Electrical Resistivity	ER
Magnetic Hysteresis	MH
Magnetic Susceptibility/Curie Temperature	MS
Magnetomechanical Properties	MP
Photoelectronic Properties	PP
Refractive Index	RI
Work Function	WF

B. Physical States

Doped	D
Fibrous (Whisker)	F
Films (thick or thin)	T
Liquid	L
Solid	S

C. Subject Coverage

Data	D
Experimental	E
General (Data + Experimental + Theory)	G
Theory	T

D. Temperature Ranges

High (Above 1273 K)	H
Low (0 to 75 K)	L
Normal (above 75 to 1273 K)	N

CodeE. Languages

Czech	C
English	E
Dutch	D
French	F
German	G
Italian	I
Japanese	J
Polish	P
Russian	R
Other	O

In listing of entries according to the search parameters in the section for the technical coding, one will find first the property codes, followed by a seven-digit material number, codes for physical states (D, F, T, L, or S), subject coverage (D, E, G, or T), temperature range (H, L, or N), languages (C, D, E, F, G, I, J, P, R, or O), document accession number (with T or E prefixes), followed by the year of publication.

BIBLIOGRAPHY

There are 365 references for thermophysical properties (with the prefix T) and 65 references for the electronic properties (with the prefix E) listed numerically. Since this report is for foreign steels, the majority of the references cited here are in foreign languages. However, every attempt is made to give the source of the English translation whenever it is available.

Because of the wide variety of literature sources cited different formats for bibliographic citations are used in the Bibliography. In this connection a number of problems of general character are encountered. CINDAS procedures in coping with these problems are described below:

1. Titles reported in the Bibliography are taken either from an abstract or from the original work. In the case of translated titles, discrepancies may exist between various sources. In general, CINDAS makes no special effort to check the accuracy of titles.
2. The names of scientific and technical journals are normally abbreviated according to the guidelines of the Chemical Abstracts Service Source Index (CASSI). In cases where a journal name is not applicable, the name of the publisher, symposium, or disseminating agency is entered in place of the journal name, depending upon the reference work.

3. Keypunching format limitations in the earlier citations necessitated the adoption of substitute representations for some of the symbols and alphabetic and numeric arrangements. The following are examples of substitute representations used in the Bibliography:

- a. Brackets [] are shown as // //.
- b. Parentheses () are shown as / /.
- c. Apostrophes are shown as #; e.g., Shul'ga is written as Shul#ga.

BIBLIOGRAPHIC CITATION LISTING

- T064660
APPARATUS FOR THE INVESTIGATION OF THERMAL DIFFUSIVITY AND TRUE SPECIFIC HEAT OF METALS.
KUPPIN, V. V. DUKAVUI, S. E.
PLATUNOV, E. S.
HIGH TEMP.
9 (3), 554-8, 1971.
(ENGLISH TRANSLATION OF TEFLOFIZ. VYS. TEMP., 9 (3), 611-6, 1971., FOR ORIGINAL SEE TPRC NO. 64659)
- T064927
EXPERIMENTAL STUDY OF THE TRUE HEAT CAPACITY OF 1 KM 19 N 9 T (CHROMIUM - NICKEL - TITANIUM) STAINLESS STEEL AT HIGH TEMPERATURES.
CHEKHOVSKOI, V. YA. GERASINA, T. Z.
ZH. FIZ. KHM.
45 (8), 2033-5, 1971.
(FOR ENGLISH TRANSLATION SEE TPRC NO. 64928)
- T064928
THE TRUE HEAT CAPACITY OF STAINLESS STEEL OF TYPE 1 KM 19 N 9 T AT HIGH TEMPERATURES.
CHEKHOVSKOI, V. YA. GERASINA, T. Z.
RUDN. J. PHYS. CHEM.
45 (8), 1152-4, 1971.
(ENGLISH TRANSLATION OF ZH. FIZ. KHM., 45 (8), 2033-5, 1971., FOR ORIGINAL SEE TPRC NO. 64927)
- T064930
THERMAL CONDUCTIVITY AND SPECIFIC HEAT CAPACITY OF ZINC SULFIDE AND CADMIUM SULFIDE IN THE TEMPERATURE RANGE FROM 20 K TO 300 K.
KRUEGER, R.
TECHNISCHE UNIVERSITÄT, BERLIN, PH.D. THESIS
99PP., 1969.
(N71-29717)
- T065271
THERMAL CONDUCTIVITY OF ALLOY STEELS AT 20-1000 DEGREES K.
ERMOGLAEV, B. I.
METALLOVED. TERM. OBRAB. METAL.
(12), 51, 1971.
(FOR ENGLISH TRANSLATION SEE TPRC NO. 74139)
- T066046
TEMPERATURE DEPENDENCE OF THE THERMAL AND ELECTRICAL CONDUCTIVITIES OF STEELS AND FERROUS HARD ALLOYS.
MINFYUKOV, V. E.
FOREIGN TECHNOLOGY DIVISION
16PP., 1972.
(ENGLISH TRANSLATION OF VESTNIK MOSKOV. UNIV., SER. FIZ.-MAT. I ESTETSTVEN. NAUK., 4 (4), 29-43, 1951; FOR ORIGINAL SEE TPRC NO. 1646)

PRODUCT EVALUATION QUESTIONNAIRE

Please assist us by evaluating this publication of Thermophysical and Electronic Properties Information Analysis Center (TEPIAC)

1. Title of Publication Evaluated: "Thermophysical and Electronic Properties of Foreign Stainless Steels: A Comprehensive Survey of the World Literature," CINDAS Rept. 61.

Dear User: We would appreciate it if you would complete this questionnaire and return it to the Thermophysical and Electronic Properties Information Analysis Center. The Defense Logistics Agency (DLA) administratively manages this information analysis center for the Department of Defense (DoD) and has the responsibility to insure that the Center is responsive to scientific and technical information needs of the defense community. Your candid evaluation and any other information you provide will be used to more effectively guide this Center in meeting your information needs, as well as assess the value of the Center to DoD. A copy of your evaluation will be forwarded to DLA.

2. Is the information (Check one or more as applicable):

Relevant Technically satisfactory Overall very useful to my job
 Timely Easy to use Other _____
 Technically excellent Expected to be used often _____

3. Benefits you gained by using this publication:

- A. How often would you estimate that you consulted or will consult this publication?

_____ times per _____ day _____ week _____ month _____ year (check one)

(1) What amount of time do you estimate that would take you to otherwise locate this information yourself _____

(2) What do you estimate this amount of time would cost you? _____

- B. Can you think of instances in which the information contained in this publication helped or could help to save/avoid costs on a project/task? (e.g., eliminates or shortens a test, substitutes material or component) Yes No

(1) In how many projects/tasks do you estimate you will use this information:

_____ 2 or less _____ 3 to 5 _____ 6 to 10 _____ 11 or more

(2) Estimated costs saved or avoided:

_____ Less than \$100 _____ \$100 to \$500 _____ \$501 to \$1000
_____ \$1001 to \$5000 _____ \$5001 to \$10,000 _____ \$10,001 or more

(3) If such savings relate to a system being developed or modified for the U.S. Government, please specify:

- C. Intangible benefits (please describe):

4. What changes, if any, would you recommend in this publication?

_____ Shorter _____ More detail _____ Organization _____ Illustrations _____ Printing
_____ Other (specify): _____

5. Name of User (optional)

Job Title _____
Organization _____
Address _____

Please use this self mailer to return this evaluation questionnaire.
